

## Case 05 How to apply a coating over existing paint

### Dusty old paint

With aging, the paint become dusty and not resistant.

### Discoloration during time

Under UV exposure pigments will be destroyed and will damage the aesthetical aspect of the façade.

### Paints peeling, humidity, freezing, sun, wind

Severe weather may damage the polymeric structure of the paint and lead to peeling and debonding.

## Solution 05 *Apply polymeric decorative renders (paste)*

### Recommended products

### Preparation

- In case of old dusty paint, remove as much as possible with high water pressure, 120 bar.
- If not well bonded then remove completely the paint with a special paint remover or by burning and then apply primers and finishes with weber.pas product range.
- If only discoloration but resistant paint, apply the primers and finishes with weber.pas product range.
